

Energy Efficiency in Public Transportation

Descripción:

The objective of the conference is to bring together diverse stakeholders for exploring creative approaches to develop competitive, smart, sustainable and cost-effective public transportation systems in European cities.

The conference will have seven sessions: Introduction and Initiatives to Increase Efficiency, Economic Incentives and Financing, Role of the Public Sector, Case Studies for Best Practices, Market-based Approaches and Stakeholder Involvement, Technology Innovation and Delivering Energy Efficiency Projects.

The event is targeted at executives, managers and decision-makers from public transport authorities and operating companies, policymaking and regulatory bodies, technology and service provider firms, equipment manufacturing companies, financiers and venture capitalists, industry consultants, research and development organizations, technical institutes, etc.

This conference will provide an excellent opportunity for organizations involved with energy efficiency to showcase their products and services
