

100% Renewable

Descripción:

As energy demands increase this one day conference will debate, discuss and examine the development of 100% renewable electricity roadmaps for key global regions and nations. Join us this June as key energy experts and economists discuss the scenarios for a global shift to 100% renewable electricity in a 2030-2050 timeframe.

This shift would concurrently tackle several major problems: fossil energy volatility, energy security, energy poverty, resource wars, economic development and boost the future global economy. 100% Renewables brings together some of the leading energy economists and experts of the day to present their scenarios, methodologies and milestones to provide attendees with a clear picture of the possible pathways for all national and regional governments, companies and investors.

Key topics include:

- Regional Plans Towards a 100% Renewable Electricity Reality
- Towards a 100% Renewable Electric Nations
- 100% Renewable Electricity Building Blocks
- Case Studies of the Future: 100% Renewable Cities & Communities
